

# Light Source

**Objective:** Students learn how light position affects how shadows are created, as well as learning consistency with framing a shot.

**Instructions:** Students choose two props (one smooth; one textured) and photograph each one using a light source in the following positions:

With a Close Light Source

Light to Right

Light in Back

Light to Left

Light in Front

With a Far Light Source

Light to Right

Light in Back

Light to Left

Light in Front

Each prop must have the same composition in each shot, and students have to adjust exposure to get the best shot. Students submit a total of 16 photos.
