

D-merge2worlds

Objective: Students hone their photography and Photoshop skills by taking photos that match light source and combine the photos to appear as if it is one shot.

Instructions: Students take photos to digitally merge two worlds into one.

Students take a scenic shot, inside or out, with good composition and depth of field, making sure to have something in the foreground. Students then take a photo of their chosen figure/prop on a white background and mimic the lighting of their scenic shot.

Using Photoshop, students work to merge the two photos with part of the figure/prop obscured by the foreground object. Students must make sure their figure/prop is the proper scale with proper shadowing and shading.

Students submit three photos: original scenic, original figure, merged world
